I have been actively working on web projects for over 4 years, meticulously ensuring that my projects comply with modern web standards. During the development process, I pay particular attention to W3C standards, browser compatibility, high performance, and search engine optimization (SEO).

My areas of expertise include WordPress, HTML, CSS (CSS Preprocessors, Bootstrap, Tailwind), JavaScript, TypeScript, React, Next.js, Node.js, Styled-Components, ANT Design, and GraphQL. Additionally, I work on micro frontend architecture and the development of modular structures.

I have experience in the e-commerce sector, where I have developed SEO-friendly, high-performance, and scalable solutions. I am proficient in managing test processes, debugging, and improving software quality using Cypress and manual testing tools. I actively use DevOps tools such as Netlify, Vercel, and GitLab and have knowledge of CI/CD pipeline management.

Furthermore, I have experience in project management and team coordination with Agile & Scrum methodologies, and I continue to improve myself in this field. In the future, I aim to specialize in technical leadership and process management, focusing on a Team Lead / Scrum Master role.

## Experience

### GRODEA

2022 - 2025

#### Freelance Web Developer

At Grodea, I developed corporate websites for brands to effectively reach their potential customers, using WordPress. Additionally, I offered freelance digital marketing services, including social media account management and strategic digital content production.

### SmartMessage

2023 - 2024

#### Frontend Developer

I worked as a Frontend Developer at SmartMessage, supporting various projects. During this process, I contributed to frontend development while collaborating effectively with the team.

### eBay Turkey & GittiGidiyor

2021 - 2022

#### Frontend Developer

In July 2021, I participated in the GittiGidiyor Technology Academy organized by GittiGidiyor. Following intensive software engineering training and hands-on projects guided by accomplished software engineers from GittiGidiyor, I transitioned into my role as a Jr. Front-end Developer starting October 2021, contributing actively to the team.

### Coderspace

2021

#### Freelance Tech Editor (Software Development)

At Coderspace, the Technology Talent Career Platform, I curated the content for the monthly software developer's newsletter (CodeBrew), where we disseminate the latest advancements in the software industry, along with crafting SEO-friendly articles focusing on software and technology.

## Education

---

- **Akdeniz University**  
Computer Programming

2019 - 2021

## Languages

---

- **Turkish**  
Native/Fluent
- **English**  
Intermediate
- **Deutsch**  
Beginner

## Volunteer Work

---

- **KEROKOD.COM**  
Founder & Digital Content Creator
- **Google Developer Students Club**  
Core Team Member

2021 - Currently

2019

## Projects

---

- **Product Detail Page 3.0 (React)**  
Gittigidiyor.com

As the PHNX team, we aimed to create a modern frontend architecture and central bff infrastructure with the GittiGidiyor product page renewal project.

In this context, we divided the product page into molecules and organisms with the atomic design architecture approach and transformed them into React Components.

We have developed the central aggregation structure on Spring Boot with microservice architecture so that the content to be presented to users can be displayed consistently in both web and native applications.

Our development process, which we started by identifying personas and preparing storyboards, proceeded with the Contract Driven Design approach.

At the beginning of each user story, we turned the process of determining the contract and sending it to Pact Broker as a whole team into a ritual.

In this way, we have parallelized the backend and frontend development processes.

What we experienced with the PDP 3.0 project as the Agile Product Team: **Contract Driven Design, Test Driven Development, User Story Board, Iterative & Incremental Development, Atomic Design - React Components, GraphQL, Spring Boot / RX Java, Pact Broker, Cypress E2E**

- **GittiGidiyor / Bring Your Old Device Take Your New Device**  
Gittigidiyor.com

I prepared a web page promoting the campaign where users can easily sell their devices such as phones, tablets, computers, smart watches and earn a coupon in return.

## Skills

---

- Agile / Scrum
- HTML & CSS
- Javascript
- React
- Next.js
- Adobe Photoshop & Figma & Zeplin
- Docker
- Kubernetes
- Jenkins
- Gitlab CI / CD
